OF THE
 INDEPENDENT RESURVEY OF THE FIFTH STANDARD PARALLEL SOUTH THROUGH
 RANGE 17 WEST AND THE SURVEY OF THE EAST BOUNDARY AND SUBDIVISIONS OF
 T.26 S., R.17 W.

Of the SALT LAKE BASE AND Meridian,
 In the State of UTAH

EXECUTED BY

RALPH GENTRY U. S. CADASTRAL ENGINEER.

HAROLD S. PAUL U. S. TRANSITMAN.

In the capacity of U. S. Surveyors, under instructions dated MARCH 15, 1921,
 issued by the United States Surveyor General to govern surveys included in
 Group No. 95, which were approved by the Commissioner of the General Land
 Office, MARCH 25, 1921.

ASSIGNMENT INSTRUCTIONS DATED MAY 2, 1923.

Survey commenced JUNE 2, 1923

Survey completed SEPTEMBER 24, 1923

2008 A-167

Lines ruled and dated in blue were surveyed by Ralph
Gentry, U. S. Cadastral Engineer.

Lines ruled and dated in red were surveyed by Harold S.
Paul, U. S. Transitman.

Description and Test of Instruments, T. 27 S., R. 17 W.

Survey commenced June 2, 1923, and executed with Buff and Buff light mountain solar transit No. 8028, used by Ralph Gentry, U. S. Cadastral Engineer, and Young and Sons light mountain solar transit No. 8573, used by Harold S. Paul, U. S. Transitman. Both instruments are equipped with full vertical circles and Smith solar attachments. The horizontal limbs are provided with two double verniers each, placed opposite to each other, and reading to single minutes of arc. This is also the least count of the lat. and decl. arcs and vertical circles. Unless otherwise specified all azimuth determinations are accomplished with the solar attachments.

The instruments were approved for use on this survey by the assistant supervisor of surveys for district No. 6, conditional upon satisfactory field tests, in assignment instructions dated May 2, 1923.

We examine the adjustments of the instruments and correct all errors, then, to test the solar apparatus by comparing their indications resulting from solar observations made during a.m. and p.m. hours with a meridian determined by observation on Polaris, we proceed as follows:

June 2, 1923, in camp, sec. 27, T. 27 S., R. 18 W., approximate latitude $38^{\circ} 26' N.$, longitude $113^{\circ} 48' W.$, with Buff and Buff transit No. 8028, which transit was used to execute the resurvey of the 5th. Standard Parallel South through R. 17 W., I make an hour angle observation on Polaris west of the meridian, making four observations, two each with the telescope in direct and reversed positions, and note a tree in the line thus determined about 2 miles distance to the N. Watch time of observation, mean of four readings, 7h. 39m. 45s. p.m. Watch fast of local mean time, 34 m.

Description and Test of Instruments, T. 26 S., R. 17 W.

25 S.

I lay off the azimuth of Polaris, $0^{\circ} 36'$ to the east, and note a tree in the meridian about 2 miles N.

June 3, 1923; at the same station, I make a meridian observation of the sun for time and latitude, observing simultaneously the altitude of the sun's lower limb and the transit of the sun's west limb, reversing the telescope and observing simultaneously the altitude of the sun's upper limb and the transit of the sun's east limb:

Mean observed altitude-----	$73^{\circ} 50'$
Reduced latitude-----	$38^{\circ} 25' 50''$
Mean watch time of observation-----	12h 32m 14s
Watch fast of local mean time-----	34m 25s

June 24, 1923; at the same station, at 9 a. m. apparent time, with Buff and Buff transit, No. 8028 in the meridian, I set off $38^{\circ} 26'$ N. on the lat. arc; $23^{\circ} 26'$ N. on the decl. arc; and determine a meridian with the solar attachment, which I find to agree with the true meridian.

At apparent noon, with the lat. arc unchanged, I observe the sun on the meridian, the resulting reading of the decl. arc is $23^{\circ} 26'$ N., which agrees with the computed declination of the sun.

At 3h 0m p. m., apparent time, with the lat arc unchanged, I set off $23^{\circ} 26'$ N., on the decl. arc and determine a meridian with the solar attachment, which I find to agree with the true meridian.

Sept. 15, 1923: At camp in sec. 15, T. 26 S., R. 17 W., approximate latitude $38^{\circ} 32'$ N; longitude $113^{\circ} 43'$ W., using Buff and Buff solar transit No. 8028, at 8h. 4m., p.m., l.m.t., I observe Polaris at eastern elongation, making four observations, two each with the telescope in direct and reversed positions, and mark a mean point in the line thus determined on a stake, driven

Description and Test of Instruments, T. 26 S., R. 17 N.

firmly in the ground, about 10 chs. N. of my station.

Azimuth of Polaris at eastern elongation $1^{\circ} 25'$

Watch fast of local mean time 36m. 46s.

Sept. 16, 1923: I lay off the Azimuth of Polaris, $1^{\circ} 25'$,

to the west and mark the meridian thus determined, by

a nail in a stake, driven firmly in the ground about

10 chs. N. of my station.

At 8h. 0m. a.m., apparent time, with transit No. 8573 in

the meridian, I set off $38^{\circ} 32'$ N. on the lat. arc;

$2^{\circ} 55'$ N. on the decl. arc, and determine a meridian

with the solar attachment, which I find to agree

with the true meridian.

At apparent noon, I make a meridian observation of the

sun for time and latitude, observing simultaneously

the altitude of the sun's lower limb and the transit

of the sun's west limb, reversing the telescope and

observing simultaneously the transit of the sun's

east limb and the altitude of the sun's upper limb:

Mean observed altitude----- $54^{\circ} 17\frac{1}{2}'$

Reduced latitude----- $38^{\circ} 32'$

Mean watch time of observation-----12h 32m 15s

Watch fast of local mean time-----36m 46s

At apparent noon, with the lat. arc unchanged, I observe the sun on the meridian; the resulting reading of the declination arc is $2^{\circ} 50'$ N., which agrees with the computed declination of the sun.

At 4h 0m p. m., apparent time, with the lat. arc unchanged,

I set off $2^{\circ} 47'$ N. on the decl. arc and determine a

meridian with the solar attachment, which I find to

agree with the true meridian.

As all the observations made during the usual hours of solar work come within $1'$ of the true meridian, I conclude that the instruments are in satisfactory adjustment.

Both instruments were kept in good adjustment throughout the progress of the survey of this township, frequent tests being made on the meridian determined by observ-

BOOK A-467
Description and Test of Instruments, T. 26 S., R. 17 W.

ation made on Polaris and near the completion of the survey of this township we test the instruments by comparing their indications during a.m. and p.m. hours with the true meridian established by observation on Polaris Sept. 15, 1923 in sec. 15, this township, as follows:

Sept. 23, 1923: At 8h 0m a.m., apparent time, with both instruments in the meridian, we set off $38^{\circ} 32'$ N. on the lat. arcs; $0^{\circ} 12'$ N. on the decl. arcs, and determine meridians with the solar attachments, which we find to agree with the true meridian.

At apparent noon, with the lat. arcs unchanged, we observe the sun on the meridian; the resulting reading of the declination arcs is $0^{\circ} 7'$ N., which agrees with the computed declination of the sun.

At 4h 0m p. m., apparent time, with the lat. arcs unchanged, we set off $0^{\circ} 4'$ N. on the decl arcs and determine meridians with the solar attachments, which we find to agree with the true meridian.

As all the solar observations made during the usual hours of solar work come within $1'$ of the true meridian, we conclude that the instruments have been maintained in satisfactory adjustment throughout the progress of the survey of this township.

Measurements

Unless otherwise specified all measurements are made with Lallie steel ribbon tapes, 5 chains in length, compared with Lufkin standard steel tape 1 chain in length, and found to be correct. The measurements are made on the slope, the vertical angles determined with a clinometer, and the slope measurements properly reduced to true horizontal distances.

Resurvey of the Fifth Standard Parallel South
through Range 17 West.

Chains. Resurvey of the Fifth Standard Parallel South
through Range 17 West.

From the standard cor. of T. 25 S., Rs. 16 and 17 W.,
which is an iron post, 3 ins. diam., extending 9 ins.
above the ground, firmly set, marked and witnessed as
described in the notes of the survey of T. 26 S., R.
16 W.

West along the S. boundary of sec. 36.

Over level desert land, through scattering growth of low
brush and grass.

Note: No indications of the original standard $\frac{1}{4}$ sec. and
sec. cors. were found on this line through R. 17 W.,
and the distances were not double chained as closings
were made on the line while subdividing the townships
to the N. and S.

General Description,
of
T 26 S., R. 17 W.

The land in this township is level desert and the drainage is to the E. and NE. There is no well defined drainage system as the few draws, or washes, that are noted extend for only a short distance before they spread out over the level land.

The soil is of loose sand, sandy loam, and rocky character and is very deep throughout the township, bed rock being reached in the process of setting the corner monuments only in a very few instances.

There is no timber within the township. There is, however, a scattering growth of shadscale, white sage, yellow top, bunch grass, and greasewood over the area embraced in this township. Note: See description at end of each mile for areas adjacent to that mile.

No. evidence of coal, oil, oil shale, or minerals was noted within the township.

General Description, T. 26 S., R. 17 W.

Chains.

No evidence of water, either on or near the surface, was noted within the township.

There was no permanent settlement within the township at the time of this survey.

The character of the soil, the scarcity of water, and the character of the natural vegetation renders the lands within this township more suitable for the grazing of sheep during the winter months. than for any other industry.

The Ely-Milford Highway crosses the township, entering on the E. boundary of sec. 24 and leaving the township on the N. boundary of sec. 6.(See official plat.)

The magnetic declination is approximately 16° E.

CERTIFICATE OF UNITED STATES SURVEYOR.

WE Ralph Gentry, U. S. Cadastral Engineer,
and Harold S. Paul, U. S. Transitman

~~XX~~ ~~XXXXXXXXXX~~ hereby certify upon honor that, in pursuance
of special instructions received from the U. S. Surveyor General for Utah
bearing date of the fifteenth day of March, 1921, we have well, faithfully, and truly
in ~~our~~ ^{our} own proper person, and in strict conformity with said instructions, the Manual of Surveying Instruc-
tions, and the laws of the United States, surveyed all those parts or portions of the subdivisions at
the east boundary of T. 26 S., R. 17 W. and resurveyed the Fifth
Standard Parallel South through Range 17 west

of the Salt Lake Base
and Meridian, in the State of Utah, which are represented in
the foregoing field notes as having been executed by ~~us~~ ^{us} on dates shown on date diagram
and under ~~our~~ ^{our} direction; and that all the corners of
said survey have been established and perpetuated in strict accordance with the Manual of Surveying Instruc-
tions, and the special written instructions of the U. S. Surveyor General for Utah
and in the specific manner described in the field notes, and that the foregoing are the original field notes of
such survey.

Ralph Gentry
U. S. Cadastral Engineer.

APPROVAL.

Harold S. Paul
U. S. Transitman.

OFFICE OF THE UNITED STATES SURVEYOR GENERAL,

Salt Lake City, Utah, Oct. 18, 1924.

The foregoing field notes of the survey of resurvey of the fifth standard parallel
south through range 17 west and the survey of the east boundary and
subdivisional lines of Township No. 26 South, Range No. 17 West of the
Salt Lake Base and Meridian, Utah,

executed by Ralph Gentry and Harold S. Paul

under his special instructions dated March 15, 1921, having been
critically examined, and the necessary corrections and explanations made, the resurvey and
they describe, are hereby approved.

E. S. Johnson
U. S. Surveyor General.

I certify that the foregoing transcript of the field notes of the above-described surveys in
has been correctly copied from the original notes on file in this office.

U. S. Surveyor General.

Lines ruled and dated in blue were surveyed by
Ralph Gentry, U. S. Cadastral Engineer.

Lines ruled and dated in red were surveyed by
Harold S. Paul, U. S. Transitman.

Lines ruled in blue and red were surveyed jointly
by Ralph Gentry, U. S. Cadastral Engineer, and
Harold S. Paul, U. S. Transitman.

Description and Test of Instruments, T. 26 S., R. 17 W.

Survey commenced June 2, 1923, and executed with Buff and Buff light mountain solar transit No. 8029, used by Ralph Gentry, U. S. Cadastral Engineer, and Young and Sons light mountain solar transit No. 8573, used by Harold S. Paul, U. S. Transitman. Both instruments are equipped with full vertical circles and Smith solar attachments. The horizontal limb of each of the two instruments is provided with two double verniers placed opposite to each other and reading to single minutes of arc. This is also the least count of the lat. and decl. arcs and full vertical circles. Unless otherwise specified all azimuth determinations are accomplished with the solar attachments.

The instruments were approved for use on this survey by the assistant supervisor of surveys for district No. 6, conditional upon satisfactory field tests, in assignment instructions dated May 2, 1923.

For preliminary test of instruments see tests of instruments on June 2 and September 23, 1923 embodied in the field notes of the survey of T. 26 S., R. 17 W.

The instruments were kept in good adjustment throughout the progress of the survey of this township, frequent tests being made on meridians established by observations made on Polaris.

For final test of instruments see the notes of the survey of T. 26 S., R. 15 W., Group 94, Utah.

Measurements.

Unless otherwise specified all measurements are made with Lallie steel ribbon tapes 5 chains in length, compared with Lufkin standard steel tape 1 chain in length, and found to be correct. The measurements are made on the slope, the vertical angles determined with a clinometer, and the slope measurements properly reduced to

Measurements

Chains.

true horizontal distances.

Resurvey of the Fifth Standard Parallel South through
Range 16 W.

From the standard township cor. of T. 25 S., Rs. 15 and 16 W., which is an iron post, 3 ins. diam., firmly set, marked and witnessed as described in the field notes of the survey of T. 26 S., R. 15 W.

West, along the S. boundary of sec. 36, on a resurvey line.

Desc. abruptly over broken mountainous land through scattering timber and undergrowth.

Note: No indications of the original $\frac{1}{4}$ sec. or sec. cors. were found on this line through R. 16 W., and the distances were not double chained as closings were made on the line while subdividing the townships to the N. and S.

x 8.30 Draw, 230 ft. below township cor., drains S. Asc. abruptly over ledges on broken E. slope.

28.60 Spur, 520 ft. above draw, projects SW. As high ledges on the steep NW. slope of spur make chaining from this point impossible, I determine the distance by triangulation as follows: Erect flag, "A", at this point and flag, "B", on line W. From Flag "B" I measure a base line N. 14.66 chs. dist., from which point flag "A" subtends an angle of $43^{\circ} 32'$ from flag "B". All bearings checked by direct reading of the solar and all angles checked by deflection.

$$C = 43^{\circ} 32'$$

Distance on line-----28.60 chs.

Distance by triangulation-----13.93 chs.

Distance by return measurement-----

42.53 chs.

2.53 chs.

40.00 chs.

Resurvey of The Fifth Standard Parallel South through

General Description

T. 26 S., R. 16 W.

The eastern portion of this township is mountainous and broken, the central portion is rolling desert and the western part is level desert. The drainage is to the west and northwest there being a well defined drainage system in the eastern portion, which gradually disappears on the level lands to the west.

The soil is rocky in the eastern portion and in some places is very shallow while in the central and western parts it is very deep and of sandy loam, gravelly, and rocky character.

There is a thinly scattering growth of small scrub timber over portions of the mountainous lands to the east.

General Description of T. 26 S., R. 16 W.

Over the central and western portions of the township there is no timber. The timber described is of no value at the present time except for fire wood, some of which is used for that purpose by sheep camps located in the vicinity during the winter months.

No evidence of coal, oil, oil shale, or minerals was noted in the township.

No evidence of water, either on or near the surface, was noted within the township.

There was no permanent settlement within the township at the time of this survey.

The character of the soil, the topographical features of the land, the scarcity of water, and the character of the natural vegetation renders the lands within this township more suitable for grazing of sheep during the winter months than for any other industry.

The Ely-Milford Highway crosses the southern part of the township, entering the township near the cor. of secs. 25, 30, 31, and 36, on the E. boundary and leaving the township on the W. boundary of sec. 19. The road to Garrison, Utah, leaves the main highway in the NE. $\frac{1}{4}$ of sec. 36 and bears in a northwesterly direction across the township, leaving same on the N. boundary of sec. 6.

The magnetic declination is approximately 16° E.

CERTIFICATE OF UNITED STATES SURVEYOR.

We, Ralph Gentry, U. S. Cadastral Engineer,
and Harold S. Paul, U. S. Transitman, ~~resurvey~~, hereby certify upon honor that, in pursu-
ance of special instructions received from the U. S. Surveyor General for Utah
bearing date of the 15th. day of March, 1921, we have well, faithfully, and truly
in our own proper person, and in strict conformity with said instructions, the Manual of Surveying Instru-
ctions, and the laws of the United States, surveyed all those parts or portions of the subdivisions
of T. 26 S., R. 16 W. and resurveyed the Fifth Standard Parallel
South through Range 16 West.

_____ of the Salt Lake Base
and _____ Meridian, in the State of Utah, which are represented in
the foregoing field notes as having been executed by us, and under our direction; and that all the corners of
said survey have been established and perpetuated in strict accordance with the Manual of Surveying Instru-
ctions, and the special written instructions of the U. S. Surveyor General for Utah
and in the specific manner described in the field notes, and that the foregoing are the original field notes of
such survey

Los Angeles, Calif.

APPROVAL.

Ralph Gentry
Harold S. Paul

U. S. Transitman.

OFFICE OF THE UNITED STATES SURVEYOR GENERAL,

Salt Lake City, Utah, Oct. 18 1924

The foregoing field notes of the ~~survey of~~ resurvey of the fifth standard parallel
south through Range 16 West; and the survey of the subdivisional
lines of Township No. 26 South, Range No. 16 West of the Salt Lake
Base and Meridian, Utah

executed by Ralph Gentry and Harold S. Paul

under the special instructions dated March 15, 1921, having been
critically examined, and the necessary corrections and explanations made, the said field notes, and the surveys
they describe, are hereby approved.

E. A. Johnson

U. S. Surveyor General

I certify that the foregoing transcript of the field notes of the above-described surveys in
_____, has been correctly copied from the original notes on file in this office.

OF THE ~~SURVEY OF THE~~

INDEPENDENT RESURVEY OF THE NORTH AND EAST BOUNDARIES

AND SURVEY OF THE SUBDIVISION OF T. 25 S., R. 17 W.

Of the Salt Lake Base And Meridian,

In the State of Utah

EXECUTED BY

Ralph Gentry, Chas F. Moore, Harold S. Paul and Elmer L. Smith

ies Cadastral Engineer and Transitlemen
 In the capacity of U. S. Surveyor, under instructions dated March 15, 1921,
 issued by the United States Surveyor General to govern surveys included in
 Group No. 25, which were approved by the Commissioner of the General Land
 Office, March 25, 1921, and assignment instructions dated
 May 22, 1923.

Survey commenced August 14, 1923.

Survey completed October 17, 1923.

All lines dated in green were surveyed by Ralph Gentry,
U.S. Cadastral Engineer.

All lines dated in blue were surveyed by Harold S. Paul,
U.S. Transitman.

All lines dated in black were surveyed by Chas. F. Moore,
U.S. Transitman.

All lines dated in red were surveyed by Elmer L. Smith,
U.S. Transitman.

Survey commenced August 14, 1923, and executed with

Buff and Buff solar transit No. 8028, used by Ralph
Gentry, U.S. Cadastral Engineer, Young and Sons solar
transit No. 8570, used by Chas. F. Moore, U.S.

Transitman, Young and Sons solar transit No. 8573, used
by Harold S. Paul, U.S. Transitman, and Young and Sons

solar transit No. 8584, used by Elmer L. Smith, U.S. Transitman.

All instruments are equipped with Smith solar attachments and full vertical circles. The horizontal limbs are each provided with two double verniers placed opposite to each other and reading to single minutes of arc, which is also the least count of the verniers of the latitude and declination arcs and vertical circles.

The instruments were approved for use on this survey by the Assistant Supervisor of Surveys for district No. 6, conditional upon satisfactory field tests in assignment instructions dated May 22, 1923.

For tests of instruments Nos. 8028 and 8573, see test of instruments at the completion of the survey in the finished notes of T. 24 S., R. 18 W.

We examine the adjustments of instruments Nos. 8570 and 8584 and correct all errors, then, to test the solar apparatus by comparing their indications resulting from solar observations made during a.m. and p.m. hours with a meridian determined by observation made on Polaris, we proceed as follows.

October 10, 1923: Stationed near the center of T. 25 S., R. 17 W., in approximate latitude $38^{\circ}38'30''$ N., longitude $113^{\circ}43'$ W.; at 6h 24m p.m. l. m. t., with instrument No. 8570, we observe Polaris at eastern elongation, making four observations, two each with the telescope in direct and reversed positions, and mark the mean point in the line thus determined, on a peg driven firmly in the ground, 8 chs. N.

Azimuth of Polaris at eastern elongation = $1^{\circ}24'47''$.

October 11th: We lay off the azimuth of Polaris, $1^{\circ}25'$ to the west, and mark the meridian thus determined by a tack in a peg driven firmly in the ground, 10 chs. N.

October 14, 1923: With the instruments in the meridian, we set off $38^{\circ}38'30''$ N., on the latitude arcs; $7^{\circ}54'30''$

S., on the declination arcs; and at 3h 0m a.m. app. t., we determine meridians with the solars which we find to agree with the true meridian.

At app. noon, with instrument No. 8570, we make a meridian observation of the sun for time and latitude, observing simultaneously the altitude of the sun's lower limb and the transit of the sun's west limb; reversing the telescope and observing simultaneously the altitude of the sun's upper limb and the transit of the sun's east limb.

Mean observed altitude =	43°24'
Reduced latitude =	38°38'30"
Mean watch time of observation =	12h 22m 30s
Watch fast of l. m. t. =	36m 15s

At app. noon, with the latitude arcs unchanged, we observe the sun on the meridian; the resulting readings of the declination arcs is 7°57'30" S., which agrees with the computed declination of the sun.

At 3h 0m p.m. app. t., with the latitude arcs unchanged, we set off 8°00' S., on the declination arcs; and determine meridians with the solars which we find to agree with the true meridian.

As all the solar observations during the usual hours of solar work, come within 1'30" of the true meridian, we conclude that the instruments are in satisfactory adjustment.

The instruments were kept in good adjustment throughout the progress of this survey, frequent tests being made on the meridian determined by observations on Polaris.

At the completion of the survey of this township, we make a final test of the instruments as follows.

October 17, 1923: With the instruments in the meridian determined by observations on Polaris, heretofore described; at 8h 30m a.m. app. t., we set off 38°38'30" N., on the latitude arcs; 2°00' S., on the declination

T. 25 S., R. 17 W.

arcs; and determine meridians with the solars which we find to agree with the true meridian.

At app. noon, with the latitude arcs unchanged, we observe the sun on the meridian; the resulting readings of the declination arcs is $2^{\circ}04'$ S., which agrees with the computed declination of the sun.

At 3h 30m p.m. app. t., with the latitude arcs unchanged, we set off $2^{\circ}07'$ S., on the declination arcs; and determine meridians with the solars which we find to agree with the true meridian.

As all the solar observations made during the usual hours of solar work, come within $1'30''$ of the true meridian, we conclude that the instruments are in good adjustment.

MEASUREMENTS.

Unless otherwise specified all measurements are made with Lallie steel tapes 5 chains in length compared with a Lifkin standard steel tape and found correct. The measurements are made on the slope, the vertical angle determined, and the slope measurements properly reduced to true horizontal distances.

METHOD OF PROCEDURE.

The South Boundary of the township is provided for in the survey of the 5th Standard Parallel South through R. 17 W., the course being west and the distance 480.00 chs.

The West boundary is provided for in the survey of the East Boundary of T. 25 S., R. 18 W., the course being North, and the distance 480.00 chs.

The East Boundary of the township is surveyed North, a distance of 480.00 chs. from the Standard cor. of T. 25 S., Rs. 16 and 17 W., where the cor. of Ts. 24 and 25 S., Rs. 16 and 17 W. is set.

METHOD OF PROCEDURE.

The North Boundary of the township is surveyed to the west from the cor. of Ts. 24 and 25 S., Rs. 16 and 17 W., to the cor. of Ts. 24 and 25 S., Rs. 17 and 18 W., the course being S. 89°53' W., the distance 479.38 chs. and the fractional distance being placed in the west half mile.

The north and east boundary of this township have previously been surveyed, but in accordance with the instructions issued for the survey of this township, all the original cors. found on these two boundaries were destroyed and a independent resurvey made of both the boundaries.

The township was subdivided from the east to the west in the regular manner.

INDEPENDENT RESURVEY OF THE WAH WAH GUIDE MERIDIAN
THROUGH T. 25 S.

From the standard cor. of T. 25 S., Rs. 16 and 17. W., which is described in the notes of the survey of T. 26 S., R. 16 W. Note: From this cor. the original standard cor. of T. 25 S., Rs. 16 and 17 W., which I destroy and which is a limestone, 15 x 6 x 6 ins., firmly set and properly marked, bears S. 2°15' W., 5.87 chs. dist.

Thence,

North, bet. secs. 31 and 36.

Descend gradually over rolling land through scattering undergrowth.

10.20 The old Ely-Milford highway, bears NW. and SE.

40.00 On gentle NW. slope, 20 ft. below the township cor.

Set an iron post, 3 ft. long, 1 in. diam., 27 ins. in the ground, for $\frac{1}{4}$ sec. cor., with brass cap marked.

GENERAL DESCRIPTION OF T. 25 S., R. 17 W.

The land within the boundaries of this township, consists
of the rolling bottom lands of a wide valley and has a
general southeasterly exposure and drainage.

The soil consists of a deep clay and sand loam, which
produces a scattering growth of shadscale, sagebrush,
and native grasses, which affords fair grazing for
stock during the winter months.

Several roads were found throughout the township, over
which supplies are hauled to the grazing sections of the
surrounding country.

GENERAL DESCRIPTION OF T. 25 S., R. 17 W.

Chains

The township is suitable for grazing purposes only, and can only be grazed during the winter months on account of there being no water on the township. •

No portion of the township is suitable for farming.

No settlers or improvements were found in the township at the time of the survey, and no indications of coal mineral or oil shale were found.

The magnetic declination was not taken on account of a defective needle.

[illegible]

The following is evidence for existing purposes only, and can

U.S. Cadastral Engineer and Transitman
CERTIFICATE OF UNITED STATES SURVEYOR.

We,

Ralph Gentry, U.S. Cadastral Engineer

Chas. F. Moore

I, Harold S. Paul

Elmer L. Smith

Transitmen

U. S. Surveyor, hereby certify upon honor that, in pursu-

of special instructions received from the U. S. Surveyor General for Utah

bearing date of the 15th day of March, 1921, I have well, faithfully, and

in my own proper person, and in strict conformity with said instructions, the Manual of Surveying Instr-

tions, and the laws of the United States, surveyed all those parts or portions of Independent

Resurvey of the North and East Boundaries, and Survey of the

Subdivision of T. 25 S., R. 17 W.,

of the Salt Lake Base

And Meridian, in the State of Utah

and date diagram

on dates shown on said diagram

the foregoing field notes, as having been executed by me, and under my direction, and that all the corners

Elmer L. Smith, U.S. Transitman.

Harold S. Paul, U.S. Transitman.

Chas. F. Moore, U.S. Transitman.

APPROVAL.

OFFICE OF THE UNITED STATES SURVEYOR GENERAL,

Salt Lake City, Utah, Oct. 18, 1924.

The foregoing field notes of the survey of resurvey of the north and east boundar-

and survey of the subdivisional lines of Township No. 25 South,

Range No. 17 West, of the Salt Lake Base and Meridian, Utah;

executed by Ralph Gentry, Elmer L. Smith, Harold S. Paul and Chas. F. Moore

under his special instructions dated March 15

critically examined, and the necessary corrections and explanations made, the said field notes, and the surveys and
they describe, are hereby approved.

U. S. Surveyor General

I certify that the foregoing transcript of the field notes of the above-described surveys in

has been correctly copied from the original notes on file in this office.

All lines dated in black were surveyed by Chas. F. Moore,
U.S. Transitman.

All lines dated in red were surveyed by Elmer L. Smith,
U.S. Transitman.

Survey commenced October 18, 1923, and executed with
Young and Sons solar transits No. 8570, used by Chas.
F. Moore, U.S. Transitman, and No. 8584, used by
Elmer L. Smith, U.S. Transitman. Both instruments are
equipped with Smith Solar attachments and full vertical
circles. The horizontal limbs are each provided with
two double verniers placed opposite each other, and
reading to single minutes of arc, which is also the
least count of the verniers of the latitude and

T. 25 S., R. 16 W.

declination arcs and vertical circles.

The instruments were approved for use on the survey by the Assistant Supervisor of Surveys for district No. 6 conditional upon satisfactory field tests in assignment instructions dated May 22, 1923.

We examine the adjustments of the instruments and correct all errors, then, to test the solar apparatus by comparing their indications resulting from solar observations made during a.m. and p.m. hours with a meridian determined by observations made on Polaris, we proceed as follows.

October 21, 1923; stationed near the cor. of secs. 15, 16, 21, and 22, T. 25 S., R. 16 W., in approximate latitude $38^{\circ}38'30''$ N., longitude $113^{\circ}36'30''$ W.; at 5h 36m a.m., l. m. t., with instrument No. 8570, we observe Polaris at western elongation, making 4 observations, two each with the telescope in direct and reversed positions and mark the mean point in the line thus determined, on a peg driven firmly in the ground, 8 chs. N.

Azimuth of Polaris at western elongation = $1^{\circ}24'40''$

At 7h 30m a.m. app. t., we lay off the azimuth of Polaris, $1^{\circ}24'30''$ to the east, and mark the meridian thus determined by a tack in a peg driven firmly in the ground, 8 chs. N.

At 9h 00m a.m. app. t., with both instruments in the meridian, we set off $38^{\circ}38'30''$ N., on the latitude arcs; $10^{\circ}28'$ S., on the declination arcs; and determine meridians with the solars which we find to agree with the true meridian.

At app. noon, using instrument No. 8584, we make a meridian observation of the sun for time and latitude, observing simultaneously the altitude of the sun's lower limb and the transit of the sun's west limb, reversing the telescope and observing simultaneously

T. 25 S., R. 16 W.

the altitude of the sun's upper limb and the transit of the sun's east limb.

Mean observed altitude = $40^{\circ}50'30''$
Reduced latitude = $38^{\circ}38'30''$ N.
Watch time of observation = 12h 22m 00s
Watch fast of local mean time = 0h 37m 11s

At app. noon, with the latitude arcs unchanged, we observe the sun on the meridian; the resulting readings of the declination arcs is $10^{\circ}31'$ S., which agrees with the computed declination of the sun.

At 3h 00m p.m. app. t., with the latitude arcs unchanged, we set off $10^{\circ}37'30''$ S., on the declination arcs; and determine meridians with the solars which we find to agree with the true meridian.

As all the solar observations during the usual hours of solar work, come within 1' of the true meridian, we conclude that the adjustments of the instruments are satisfactory.

The instruments were kept in good adjustment throughout the progress of this survey, frequent tests being made on the meridian determined by observations on Polaris.

At the completion of the survey of this township, we make a final test of the instruments as follows.

November 7, 1923: With both instruments in the meridian established by observation on Polaris, as described on page two of these notes, at 8h 30m a.m. app. t., we set off $38^{\circ}38'30''$ N., on the latitude arcs; $16^{\circ}4'30''$ S., on the declination arcs; and determine meridians with the solars which we find to agree with the true meridian.

At app. noon, with the latitude arcs unchanged, we observe the sun on the meridian; the resulting readings of the declination arcs is $16^{\circ}8'$ S., which agrees with the computed declination of the sun.

At 3h 30m p.m. app. t., with the latitude arcs unchanged, we set off $16^{\circ}10'$ S., on the declination arcs; and determine meridians with the solars which we find to

T. 25 S., R. 16 W.

agree with the true meridian.

As all the solar observations during the usual hours of solar work, come within $1'$ of the true meridian, we conclude that the instruments are in satisfactory adjustment.

MEASUREMENTS.

Unless otherwise specified all measurements are made with Lullie steel tapes 5 chains in length compared with a Lukin standard steel tape and found correct. The measurements are made on the slope, the vertical angle determined, and the slope measurements properly reduced to true horizontal distances.

METHOD OF PROCEDURE.

The survey of the south boundary of the township or the Fifth Standard Parallel South, is provided for in the notes of the survey of T. 25 S., R. 16 W., the course being East, and the distance 480.00 chs.

The survey of the west boundary of the township, or the Wah Yah Guide Meridian, is provided for in the notes of the survey of T. 25 S., R. 17 W., the course being North, and the distance 480.00 chs.

The east boundary of the township, is surveyed North, a distance of 480.00 chs. from the standard cor. of T. 25 S., Rs. 15 and 16 W., where the cor. of Ts. 24 and 25 S., Rs. 15 and 16 W. is set.

The north boundary of the township, is surveyed to the west from the cor. of Ts. 24 and 25 S., Rs. 15 and 16 W., to the cor. of Ts. 24 and 25 S., Rs. 16 and 17 W.; the course being S. $83^{\circ}59'$ W., the distance, 475.50 chs. and the fractional distance being placed in the west half mile.

The north and east boundaries of the township, are

METHOD OF PROCEDURE.

Deposit a limestone, 6 x 4 x 2 ins., at base of post,
marked with a cross (X).

No suitable bearing trees available and soil too loose
for pits.

Land, broken and mountainous with a general easterly
exposure and drainage.

Soil, shallow rocky clay and sand loam; 2nd rate.

Undergrowth, scattering sagebrush and mountain rush.

Timber, scattering juniper and pinon.

Fair grazing.

INDEPENDENT RESURVEY OF THE N. BDY. OF T. 25 S., R. 16 W.

Chains.

From the cor. of Ts. 24 and 25 S., Rs. 16 and 17 W.,
which is described in the notes of the survey of
T. 25 S., R. 17 W.

East, on random line along the N. bdy. of the township,
setting temp. $\frac{1}{4}$ sec. and sec. cors. at intervals of
40.00 chs.

239.52 Left point for triangulation.

319.52 Broken ledges make chaining to the E. impossible, I
therefore determine the distance by triangulation as
follows: Erect flag "C" on line to the E. and it being
impossible to measure a base line from the 319.52 chs.
point, I return to the 239.52 chs. point which I
designate as "A" and measure a base line "AB", South,
40.00 chs. dist., from which point flags "AC"
subtend an angle of $69^{\circ} 55'$. All angles by three
repetitions with error of $0'30''$ balanced to 180° .

Distance on line	239.52 chs.
Distance by triangulation	109.40 chs.
	<hr/> 348.92 chs. ✓

348.92 To point of triangulation.

359.62 High ledges make chaining to the E. of this point impos-
sible, I therefore determine the distance by triangulation
as follows: Erect flag "A" at this point and flags
"B" and "C" on line E. It being impossible to measure
a base line from flags "A", "B", or "C", I commence
at flag "B" and run a transit line S., to a point which
I designate as "D" and from which point flag "A" bears

INDEPENDENT RESURVEY OF THE W. BDY. OF T. 25 S., R. 16 W.

CHAINS.

N. $48^{\circ} 22\frac{1}{2}'$ W., and flag "C" bears N. $43^{\circ} 48\frac{1}{2}'$ E. From flag "D" measure base line "DE", S. $63^{\circ} 37\frac{1}{2}'$ W., 20.00 chs. dist., from which point flags "AD" subtends an angle of $90^{\circ} 0'$. All angles by three repetitions, with error of $0' 20''$ balanced to 180° .

Therefore

Course and distance from flags "A" to "B" is East, 39.90 chs.

Course and distance from flags "B" to "C" is East, 34.02 chs.

Course and distance from flags "B" to "D" is South, 35.46 chs.

Course and distance from flags "A" to "D" is N. $48^{\circ} 22\frac{1}{2}'$ W. 53.38 chs.

Distance measured East from flag "B" 8.66 chs.

Distance on line to flag "A"	359.62 chs.
Distance by triangulation from "A" to "C"	73.92 chs.
	<hr/> 433.54 chs.

433.54 To flag "C" of triangulation.

479.52 Intersect the W. bdy. of T. 24 S., R. 15 W. 14 lks. N. of the cor. of Ts. 24 and 25 S., Rs. 15 and 16 W.

GENERAL DESCRIPTION OF T. 25 S., R. 16 W.

The east portion of this township is rough and mountainous being broken by the high, ledges, spurs and ridges which form the Wah Wah Mountains. The west portion of the township, consists of of rolling bench land with a general westerly exposure and drainage.

The only timber found in the township is scattering juniper, pinon and balsam, on the slopes of the spurs and ridges of the Wah Wah Mountains. This timber has no commerical value except for fire wood and fence posts.

The entire township is covered with a scattering undergrowth of shadscale and sagebrush and native grasses

GENERAL DESCRIPTION OF T. 25 S., R. 16 W.

which affords good grazing for stock during the winter months, there being no water in the township to make it possible for grazing the township during the summer months.

The soil in the east portion of the township, consists of a shallow rocky clay and sand loam, underlaid by limestone bedrock, while that in the west portion consists of a deep clay and sand loam.

Several roads which are in a poor condition are found in the township, over which supplies are hauled to the different grazing sections of the surrounding country.

No portion of the township is suitable for farming and no settlers were on the township at the time of the survey.

No indications of coal, oil shale or mineral were found in the township.

The magnetic declination was not taken on account of a defective needle.

TRANSITMEN.

CERTIFICATE OF UNITED STATES SURVEYOR

X We, Chas. F. Moore and Elmer L. Smith, U.S. Transitmen,
U. S. Surveyor, hereby certify upon honor that, in pursu-
ance of special instructions received from the U. S. Surveyor General for Utah
bearing date of the 15th day of March, 1921, we have well, faithfully, and
in our own proper persons, and in strict conformity with said instructions, the Manual of Surveying In-
structions, and the laws of the United States, surveyed all those parts or portions of the East and No
Boundaries and Subdivision of T. 25 S., R. 16 W.

of the Salt Lake Base
and Meridian, in the State of Utah, which are represented
and date diagram on dates shown on said diagram
the foregoing field notes as having been executed by us, and under our direction, and that all the corners
said survey have been established and perpetuated in strict accordance with the Manual of Surveying In-
structions, and the special written instructions of the U. S. Surveyor General for Utah
and in the specific manner described in the field notes, and that the foregoing are the original field notes
such survey.

Bluff, Utah,
April 16 1924.
Los Angeles, California,
April 30 1924.

Chas. F. Moore
U. S. Surveyor
Transitman
APPROVAL.

OFFICE OF THE UNITED STATES SURVEYOR GENERAL,

Salt Lake City, Utah, Oct. 18, 1921

The foregoing field notes of the survey of resurvey of the east and north bounda-
ries, and the survey of the subdivisional lines of Township No. 25
R. 16 W. of the Salt Lake Base and Meridian, Utah

executed by Chas. F. Moore and Elmer L. Smith
under his special instructions dated March 15, 1921, having been
critically examined, and the necessary corrections and explanations made, the said field notes, and the surveys
they describe, are hereby approved.

[Signature]
U. S. Surveyor General

I certify that the foregoing transcript of the field notes of the above-described surveys in
has been correctly copied from the original notes on file in this office.

Lines ruled and dated in black were surveyed by Ralph
Gentry, U.S. Cadastral Engineer.

Lines ruled and dated in red were surveyed by Harold S.
Paul, U.S. Transitman.

Test of Instruments

T. 27 S., R. 18 W.

Survey commenced June 2, 1923, and executed with Buff & Buff light mountain solar transit No. 8028, used by Ralph Gentry, U.S. Cadastral Engineer, and Young & Sons light mountain solar transit No. 8573, used by Harold S. Paul, U.S. Transitman. The instruments are equipped with Smith solar attachments and full vertical circles; the horizontal limbs being provided with two double verniers, placed opposite to each other, and reading to single minutes of arc, which is also the least count of the latitude and declination arcs and vertical circles.

The instruments were approved for use on this survey by the Assistant Supervisor of Surveys for District No. 6, in assignment instructions dated May 2, 1923, conditional upon satisfactory field tests.

June 2, 1923, at our camp in sec. 27, T. 27 S., R. 18 W., Salt Lake Base & Meridian, in approximate latitude $38^{\circ} 25' 30''$ N., and longitude $113^{\circ} 48'$ W., I examine the adjustments of both transits and correct all errors. Then to test the solar apparatus by comparing their indications hourly with a true meridian established by Polaris observation as follows:

At the same station, at 7h 39m 45s by my watch, which I found to be 34m 25s fast of local mean time by a meridian observation the day before, I observe Polaris west of the meridian, making four observations, two each with the telescope in direct and reversed positions, and mark the mean point in the line thus determined, on a peg driven firmly in the ground, about 10 chs. N.

Watch time of observation, mean of four readings 7h 39m 45s p.m.

Watch fast of local mean time 34m 25s.

Local mean time of observation 7h 5m 20s p.m.

Test of Instruments to 1923

T. 27 S., R. 18 W.

Azimuth of Polaris $0^{\circ} 36'$ W. of meridian.

This observation was taken with Buff & Buff transit No. 8028.

June 3, 1923, at the same station, at 8h 0m a.m. apparent time, I lay off $36'$ to the east, and mark a point in the meridian thus determined, with a nail in a hub driven firmly in the ground about 10 chs. N. of my station.

At 9h 0m a.m. apparent time, with both instruments in the meridian, we set off $38^{\circ} 26'$ N. on the latitude arcs, $22^{\circ} 15'$ N. on the declination arcs, and determine meridians with the solar attachments, which we find to agree with the true meridian.

At apparent noon, using Buff & Buff transit No. 8028, I make a meridian observation of the sun for time and latitude, observing simultaneously the altitude of the sun's lower limb and the transit of the sun's west limb, reversing the telescope and observing simultaneously the altitude of the sun's upper limb and the transit of the sun's east limb.

Mean observed altitude	$73^{\circ} 50'$
Reduced latitude	$38^{\circ} 25' 50''$
Mean watch time of observation	12h 32m 14s
Watch fast of local mean time	34m 25s

At apparent noon, with both instruments in the meridian and the latitude arcs unchanged, we find the reading of the declination arcs to be $22^{\circ} 16'$ N., which agrees with the computed declination of the sun.

At 3h 0m p.m. apparent time, with the latitude arcs unchanged, we set off $22^{\circ} 17'$ N. on the declination arcs and determine meridians with the solar attachments, which we find to agree with the true meridian.

As all the solar observations made during the usual hours of solar work come within $1'$ of the true meridian, we

conclude that the adjustments of the instruments are satisfactory.

The instruments were kept in good adjustment throughout the progress of the survey of this township, frequent tests being made on meridians determined by observation on Polaris.

For final test of instruments for the survey of this township see test of instruments at the beginning of the notes for the survey of T. 26 S., R. 18 W.

Chains.

Measurements

Unless otherwise specified, all measurements are made with Lallie steel ribbon tapes, five chains in length, compared with Lufkin standard steel tape one chain in length and found to be correct. The measurements are made on the slope, the vertical angle determined, and the slope measurements properly reduced to true horizontal distances.

General description of T. 27 S., R. 18 W.

The lands in the western part of the township are mountainous and rolling mountainous in character and drain to the east to a small valley draining north and south toward the center of the township. The lands in the central part of the township are high mountainous and broken, forming a high divide running north and south across the township. The drainage is to the east and west from this divide and there is a break in the divide near the center of the township through which the small valley to the west drains. The lands in the eastern part of the township are rolling desert and drain to the northeast into Pine Valley.

The soil over a greater part of the township is rocky, 2nd., 3rd., and 4th. rates, and is of porphyry, sandstone, and quartz formation. In the eastern part the soil is generally very deep, but in the mountainous part throughout the central and western portions of the township the bedrock is very near the surface. In the western part of the township there is a medium dense growth of small juniper and pinon timber. In the central part the timber is scattering and in the eastern part, or that part embracing the desert lands, there is scarcely none. This timber is of no value at the present time except for fire wood and a limit-

General description of T. 27 S., R. 18 W.

ed number of fence posts.

There are two springs and a small pond of water in the township. Potch-in-pa Spring is located in the NW $\frac{1}{4}$ of the SE $\frac{1}{4}$ of sec. 27. There is a small stream of good water flowing from this spring. The other spring (local name unknown) is located in the NW $\frac{1}{4}$ of the NE $\frac{1}{4}$ of sec. 36. There is a storage cistern and three concrete troughs near this spring to which the water is conveyed by a 1 in. iron pipe. There is a small pond in the bottom of a large draw in the NE $\frac{1}{4}$ of the NE $\frac{1}{4}$ of sec. 26. This water is suitable for watering livestock and apparently remains throughout the year.

There is a medium growth of vegetation, mainly shadscale, white sage, black sage, sagebrush, yellow top, and bunch grass, on the desert lands to the east and the mountainous lands in the central part. In the western part, especially where the timber is more dense, the undergrowth is scattering.

No evidence of minerals, coal, or oil, was noted in the township.

The extent of settlement in the township at the time of this survey consists of a four room frame house, owned by John Ryan, and is located in the southeast cor. of the SW $\frac{1}{4}$ of the NE $\frac{1}{4}$ of sec. 27. The approximate value of this property is \$500.00.

The lands embraced in this township are, apparently, better adapted to the grazing of livestock than to any other industry. This is true because of the topographical features of the land, the character of the vegetation, the nature of the soil, and the scarcity of water, as stated before in this description. There is, however, sufficient snow fall in the winter to provide the necessary water to livestock. For this reason the

General description of T. 27-S. 3-E. 12 N.

lands are more suitable for grazing during the winter months and many bands of sheep are being grazed there during this period each year.

The magnetic declination in this locality is not constant throughout as local attraction has a decided effect upon the needle. The average declination is, 16° E.

CERTIFICATE OF UNITED STATES SURVEYOR ENGINEER. AND TRANSITMAN.

We Ralph Gentry, Cadastral Engineer, U.S. Surveyor, hereby certify upon honor that, in pursuance of special instructions received from the U. S. Surveyor General for Utah bearing date of the 3rd day of March, 1921, we have well, faithfully, and in our own proper persons and in strict conformity with said instructions, the Manual of Surveying Instructions, and the laws of the United States, surveyed all those parts or portions of the west and north boundaries and subdivisions of T. 27 S., R. 18 W.

_____ of the Salt Lake Base and _____ Meridian, in the State of Utah, which are represented on dates shown on date diagram the foregoing field notes as having been executed by me, and under my direction; and that all the corners said survey have been established and perpetuated in strict accordance with the Manual of Surveying Instructions, and the special written instructions of the U. S. Surveyor General for Utah and in the specific manner described in the field notes, and that the foregoing are the original field notes of such survey.

Ralph Gentry
U.S. Cadastral Engineer
Harold S. Paul
U.S. Transitman.

APPROVAL.

OFFICE OF THE UNITED STATES SURVEYOR GENERAL,

Salt Lake City, Utah, June 20

The foregoing field notes of the survey of the west and north boundaries and the subdivisions lines of Township No. 27 South, Range No. 18 West of the Salt Lake Base and Meridian, Utah,

executed by Ralph Gentry and Harold S. Paul under his special instructions dated March 3, 1921, having critically examined, and the necessary corrections and explanations made, the said field notes, and the surveys they describe, are hereby approved.

E. A. Johnson
U. S. Surveyor General

I certify that the foregoing transcript of the field notes of the above-described surveys in _____, has been correctly copied from the original notes on file in this office.

Lines in red run by Elmer L. Smith, U. S. Transitman.

Lines in green run by Harold S. Paul, U. S. Transitman.

T. 27 S., R. 19 W.

TEST OF INSTRUMENTS

Survey commenced June 4, 1923, and executed with Young & Sons solar transit No. 8570, used by Chas. F. Moore, U. S. Transitman, Young & Sons solar transit No. 8589, used by Elmer L. Smith, U. S. Transitman, and Young & Sons solar transit No. 8573, used by H. S. Paul, U. S. Transitman. The instruments are equipped with Smith solar attachments and full vertical circles; the horizontal limbs being provided, with two double verniers, placed opposite to each other, and reading to the single minutes of arc, which is also the least count of the latitude and declination arcs, and the vertical circle. Unless otherwise specified all lines were run in meridians, established with the solar attachments.

The instruments were approved for use on this survey by the Assistant Supervisor of Surveys for District No. 6, in assignment instructions dated May 2, 1923, conditional upon satisfactory field test.

June 5, 1923, in our camp in sec. 22, T. 27 S., R. 19 W., Salt Lake Base and Meridian, in approximate latitude $38^{\circ} 27' 30''$ N., and longitude $113^{\circ} 53'$ W., I examine the adjustments of both instruments, Nos. 8570 and 8589, and correct all errors. I compare the solar apparatus by their indications hourly with the meridian established by Polaris observation as follows:

At the same station, June 5, 1923, at 3h 23m 45s^{a.m.} by my watch, which is 38m 29s fast of l.m.t., I observe Polaris at eastern elongation, making four observations, two each with the telescope in direct and reversed positions, and mark the mean point in the line thus determined, on a hub driven firmly in the ground, 10 chs. N.

Azimuth of Polaris at eastern elongation is $1^{\circ} 25' 8''$.
The observation was taken with Young & Sons solar transit No. 8570, used by Chas. F. Moore.

T. 27 S., R. 19 W.

June 10, 1923, at the same station, I lay off $1^{\circ} 25' 8''$ to the west, and mark the point in the meridian thus determined with a nail in a hub driven firmly in the ground, 10 chs. N. of my station.

June 10, 1923, at the same station, at 8h 0m a.m. app. t. with instruments No. 8570, used by Chas. F. Moore and No. 8589, used by Elmer L. Smith, in the meridian, we set off $38^{\circ} 27' 30''$ N. on the latitude arcs, and $22^{\circ} 58' 47''$ N. on the declination arcs, and determine meridians with the solar attachments, which we find to agree with the true meridian.

At app. noon, using Young & sons solar transit, No. 8570, I make a meridian observation of the sun for time and latitude, observing simultaneously the altitude of the sun's lower limb, and the transit of the sun's W. limb, reversing the telescope and observing simultaneously the altitude of the sun's upper limb and the transit of the sun's E. limb.

Mean observed altitude	$74^{\circ} 31' 30''$
------------------------	-----------------------

Reduced latitude	$38^{\circ} 27' 30''$ ✓
------------------	-------------------------

Mean watch time of observation	12h 37m 42s
--------------------------------	-------------

Watch fast of local mean time	38m 39s
-------------------------------	---------

At app. noon with both instruments in the meridian and the latitude arcs unchanged, we find the reading of the declination arcs to be $22^{\circ} 59'$ N., which agrees with the computed declination of the sun.

At 4h 0m p.m. app. t. with the latitude arcs unchanged, we set off $23^{\circ} 0' 30''$ N. on the declination arcs and determine meridians, with the solar attachments, which we find to agree with the true meridian.

As all of the solar observations made during the usual hours of solar work come within $1'$ of the true meridian, we conclude that the adjustments of the instruments are satisfactory.

For test of instrument, Young & Sons solar transit No. 8573, used by H. S. Paul, U. S. Transitman, see field notes of T. 27 S., R. 18 W., Group 97.

T. 27 S., R. 19 W.

MEASUREMENTS.

Unless otherwise specified, all measurements are made with Lallie steel ribbon tapes, 5 chs. in length, compared with a Lufkin standard steel tape, on chain in length, and found to be correct. The measurements are made on the slope, the vertical angles determined and the slope measurements properly reduced to true horizontal distances.

WEST BOUNDARY OF T. 27 S., R. 19 W.

FINAL TESTS OF INSTRUMENTS AT COMPLETION OF
THIS SURVEY.

For final tests of instruments, Young & Sons solar transit No. 8570, used by C. F. Moore, U. S. Transitman, and Young & Sons solar transit No. 8589, used by Elmer L. Smith, U. S. Transitman, see field notes of T. 26 S., R. 19 W., under the heading of Tests of instruments, at the beginning of the survey.

For final test of instrument, Young & Sons solar transit No. 8573, used by H. S. Paul, U. S. Transitman, I proceed as follows:

June 2, 1923. at my camp in sec. 27, T. 27 S., R. 18 W., Salt Lake Base & Meridian, in approximate latitude, $38^{\circ} 25' 30''$ N., and longitude $113^{\circ} 48'$ W., I examine the adjustments of the instrument and correct all errors. Then to test the solar apparatus by comparing their indications hourly with a true meridian established by Polaris observation as follows:

At the same station, 7h 39m 45s p.m. by my watch, which I found to be 34m 25s fast of local mean time by a meridian observation the day before, I observe Polaris west of the meridian, making four observations, two with the telescope in direct and reversed positions, and mark the mean point in the line thus determined, on a peg firmly driven in the ground, about 10 chs. N.

Watch time of observation, mean of four readings

7h 39m 46s p.m.

Watch fast of local mean time 34m 25s

Azimuth of Polaris is $0^{\circ} 36'$ W. of meridian

June 19, 1923. At 8h 0m a.m. app. time, with instrument on the meridian, I set off $38^{\circ} 26'$ N. on the latitude

T. 27.S., R. 19.W.

arc, $23^{\circ} 23'$ N., on the declination arc, and determine a meridian, which I find to agree with the true meridian.

At apparent noon, with the instrument in the meridian and the latitude arc unchanged, I find the reading of the declination arc to be $23^{\circ} 23'$ N., which agrees with the computed declination of the sun.

At 4h 0m p.m. apparent time, with the latitude arc unchanged, I set off $23^{\circ} 23'$ N., on the declination arc and determine a meridian, which I find to agree with the true meridian.

As all of the solar observations made during the usual hours of solar work come within $1'$ of the true meridian, I conclude that the adjustments of the instrument is satisfactory.

GENERAL DESCRIPTION

The land embraced in this township is mountainous, broken hills and rolling bench land. Needle Range enters the township on the S. bdy. of sec. 36 and runs in a northerly direction thru the township, and is the main divide between Hamlin Valley and Pine Valley. The eastern slope of this divide is broken and cut up with small draws, and has a general drainage to the east. The western slope of this divide consists of broken, and rolling bench land, and becomes more rolling as you continue west from the divide, until the land embraced in the entire sixth range from the east may be termed as rolling bench land. The whole of the township is covered with a shallow, gravelly, sandy, clay loam soil, which becomes deeper and finer in texture as you get farther east or west from the main divide.

T. 27 .S., R. 19 W.

The east four ranges of sections are covered with a heavy growth of juniper and pinon pine, and along the higher portion of the Needle Range may be found balsam fir timber mixed with the juniper and pinon pine. The west two ranges of sections are covered with what may be termed as a medium growth of juniper and pinon pine, as the density varies from heavy to scattering. On the entire township may be found a medium growth of sagebrush, and a fair stand of bunch grass. On the higher portions of this township may be found mountain mahogany, mountain rush, service berry, and buck brush, which varies in density as to the locality, and becoming more dense as the altitude increases.

North Sulphur spring, the largest spring in the township, rises in the $SE\frac{1}{4}SE\frac{1}{4}$ of sec. 27, and flows for a short distance SW. The other springs, which are relatively small, may be found in this township as follows: Cougar Springs, in the $SE\frac{1}{4}SW\frac{1}{4}$ of sec. 9; a spring, name unknown, in $NE\frac{1}{4}NW\frac{1}{4}$ of sec. 25; a spring, name unknown, in the $NW\frac{1}{4}SW\frac{1}{4}$ of sec. 22; a seep, name unknown, in $SE\frac{1}{4}NE\frac{1}{4}$ of sec. 27; a spring, name unknown, $SE\frac{1}{4}SW\frac{1}{4}$ of sec. 2; and it is understood that during some years there may be found a spring at Ropers cabin in $NW\frac{1}{4}SE\frac{1}{4}$ of sec. 14.

The whole of the township affords a very good range for stock, especially sheep, as there is a good growth of browse feed. This area is best adapted for winter range, as the water supply is not sufficient in the summer, but with the winter snows for the water supply, it affords very good grazing.

There are no settlers on this township, and the only improvement on the township is Ropers cabin, which is a log cabin, 10x12 ft., with an earth floor.

No trace of mineral or oil was found in this township.

FIELD ASSISTANTS.

[illegible]

CERTIFICATE OF UNITED STATES SURVEYOR.

We, Chas. F. Moore, Elmer L. Smith, and Harold S. Paul, in the presence of U. S. Transitman _____, U. S. Surveyor, hereby certify upon honor and in accordance with the special instructions received from the U. S. Surveyor General for _____ Utah bearing date of the March day of 3rd, 1921, ^{WE} I have well, faithfully, and in ^{our} my own proper persons and in strict conformity with said instructions, the Manual of Surveying Instructions, and the laws of the United States, surveyed all those parts or portions of West Boundary, North Boundary and Subdivisions of T. 27 S., R. 19 W.

_____ of the Salt Lake Base and _____ Meridian, in the State of Utah, which are represented in _____ and date diagram _____, the foregoing field notes as having been executed by me, and under my direction; and that all the corners of said survey have been established and perpetuated in strict accordance with the Manual of Surveying Instructions, and the special written instructions of the U. S. Surveyor General for Utah and in the specific manner described in the field notes, and that the foregoing are the original field notes of such survey.

Bluff, Utah, February 25, 1924.

Chas. F. Moore
U. S. Transitman U. S. Surveyor.

Los Angeles, Cal., Apr. 12, 1924.

Harold S. Paul
U. S. Transitman

APPROVAL.

Los Angeles, Cal., Apr. 12, 1924.

Elmer L. Smith
U. S. Transitman

OFFICE OF THE UNITED STATES SURVEYOR GENERAL,

Salt Lake City, Utah, June 30, 1924.

The foregoing field notes of the survey of the west and north boundaries and subdivisinal lines of Township No. 27 South, Range No. 19 West of the Salt Lake Base and Meridian, Utah;

executed by Chas. F. Moore, Elmer L. Smith and Harold S. Paul

under the special instructions dated March 3, 1921, having been critically examined, and the necessary corrections and explanations made, the said field notes, and the surveys they describe, are hereby approved.

E. A. Douson
U. S. Surveyor General.

I certify that the foregoing transcript of the field notes of the above-described surveys in _____, has been correctly copied from the original notes on file in this office.
